

Conference: Lean Management on October 27, 2011

itelligence AG: Optimized Capacities, Inventories and Throughput Times with Lean Management and SAP

Bielefeld, October 5, 2011 – German companies are now also profiting from lasting economic growth. The reason: Their high degree of customer orientation and continuous innovation management. However, for long-lasting success that is independent of external influences such as a fluctuating economy, concepts to balance out the ever-present cost pressure are required. In practice, this means one thing in particular for the manufacturing industry: Lean production.

itelligence AG invites you to a conference about this topic on October 27, 2011 from 12:00 noon in the Conference Center in Bielefeld. The Lean Management conference will cover the issue of how to achieve optimum added value using needs-based manufacturing. The conference will strike a good balance between the theoretical and practical aspects.

Alexander Groß, IT Manager of Seidel GmbH + Co. KG will provide an insight into the practical side of things. He will show how the company from Hessen, focused on the midmarket segment, was able to realize lean production and measurably reduce complexity by introducing SAP.

Dr. Bodo Wiegand, Managing Director of the LMI Management Institute will present details about the concept and the role of people as the central factor in lean management.

As well as the “people” factor, feedback from production in particular is also of key importance. Johannes Bleicher, Managing Director of top flow GmbH will therefore particularly focus on the integration of production data in real time in his presentation. He will show how manufacturing control and increased flexibility can be achieved.

Ingo Böckmann, Director of Market Management, itelligence AG, explains, “We are presenting practice-oriented approaches for direct IT implementation here, for the optimization of capacities, inventories and throughput times. As a result of the high business process integration, SAP in particular offers the option of carrying out thorough production and material flow planning.”
