

IT expertise in SAP system landscapes

Connecting what belongs together –  
systematically!

## Solutions to a complex problem

# For integrating your systems, you need suitable solutions, modern technologies and a trend-setting strategy!

» Are you responsible for operating a complex SAP and IT landscape? Do you plan integrated scenarios between business-critical applications and SAP systems? Are your business partners already connected? Do you want to develop your IT strategically? Does this sound like you? We can help you find the right solution for all these situations!«

itelligence AG

The Technology Consulting division at itelligence AG offers you technical expertise at the highest level. We have years of experience with the complex IT landscapes of midmarket customers and large consolidated subsidiaries. The increasing complexity of system landscapes coupled with high availability requirements for applications call for high-quality planning and operation expertise. From the analysis and planning of suitable solutions right through to implementation and support, we are at your

service. Our certified specialists have accumulated extensive experience in numerous projects. You can benefit from this expertise with future-oriented technologies!

We can advise you in all life cycle phases of your SAP and IT landscape, especially the following cases:

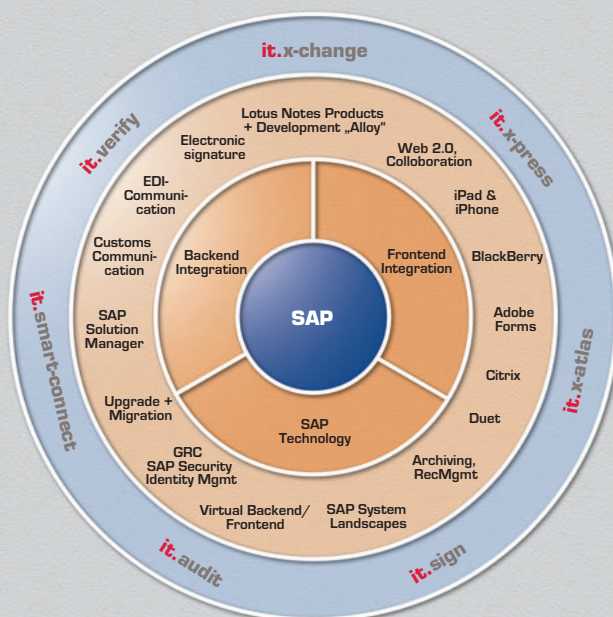

- prior to strategic IT decisions
- optimizing your IT processes
- integrating legacy or third-party systems
- creating transparency in IT costs

### SAP Technology Consulting: Basis and Infrastructure

Our experienced SAP infrastructure experts can help you with the following key topics for planning, setting up and operating complex multi-stage SAP system landscapes:

- Planning and implementing high-availability SAP system landscapes
- Release change for all SAP system components
- Database and operating system platform migration
- Technological hardware changes
- Performance analyses
- SAP authorization and security concepts
- Administrator workshops
- Conversion to Unicode (globalization)
- SAP data archiving and document management
- SAP Solution Manager (including all scenarios)
- Virtualization of SAP system landscapes
- Operating concepts for SAP system landscapes

## Portfolio

The new itelligence building in Bielefeld.

## Architecture Management

itelligence IT architecture management optimally aligns integrated corporate architectures to business aims, business processes and organizational set-up in order to keep up with the ever-increasing pace of process and technological development.

We are happy to help with the following key topics:

- Architecture scoping
- Application integration
- Scenario assessment

## Process Integration

Our focuses include the integration of business-critical applications and business partners. We can support and assist you in this, from IT strategy and architecture consulting through choosing a solution to implementing and operating the systems. A frequent basis for this sort of integration task is SAP NetWeaver Process Integration (SAP NW PI). This integrates cross-system business processes and serves as a central data hub and heart of the overall interface management of an IT landscape.

Our task areas are divided into the following scopes:

- SAP NW PI Consulting
- SAP NW PI Product Development
- SAP NW PI Application Support
- SAP NW PI Basis and Administration

## SAP NW PI and it.x products

On the basis of SAP NW PI, itelligence has developed a range of products which support the integration scenarios. Additional information can be found at:

<http://it-x-change.itelligence.de/en>

<http://it-x-press.itelligence.de/en>

### it.x-change

it.x-change is a sophisticated EDI solution that enables your business contacts (clients, suppliers and so on) to link to your IT systems easily and securely.

### it.x-press

With it.x-press, itelligence has developed an integration solution which enables a direct electronic connection with CEP service providers. By means of it.x-press, you can easily and effectively integrate your courier, express and package service providers in your SAP system and implement a fully automatic, electronic exchange of data.

We have also developed various **communication adapters** (e.g. OFTP2, FTAM, X.400 etc.) for SAP NW PI. Apart from SAP NW PI, the **it.smart-connect Suite** (SAP Notes integration) and **it.sign** (digital signature of SAP invoices) complete the product portfolio.

Our technical solutions have been developed by experts and tested in real situations – quite simply, we offer good solutions for integrating different systems!

**SAP® Certified**  
Powered by SAP NetWeaver®

**SAP® Certified**  
in Run SAP Implementation

### Collaboration

Cooperation between multiple people or groups of people or work in virtual teams is given considerable support by collaboration software. itelligence can help you to find your own individual way. Support can be provided by our experts in the following topic areas:

- Lotus Notes/Domino consulting and development
- SAP Notes integration
- iPhone and iPad integration
- BlackBerry integration
- SAP/Adobe integration

### IT security

Highly integrated ERP systems are the core of a company and contain highly sensitive data and information, the loss of which can severely damage the company. itelligence can support you in developing security concepts for the SAP world. We can check the configuration of your systems and authorizations, identify faults, develop security concepts and support you in their implementation.

This means that risks can be minimized with sophisticated authorization concepts and standards. We are at your disposal for any questions on access and authorization projects for SAP systems, whether an existing access and authorization concept needs reviewing and improving or a permanently operational control

system for compliance with legal regulations requires setting up:

- Reviewing authorizations with it.audit security
- Permanent (online) monitoring with SAP GRC Access Control
- Creating transparency in authorization and risks
- Determining clearly defined responsibilities and processes
- Creating comprehensive regulations for checking authorization

### Data and Document Archiving

When it comes to data archiving, we can assist you in developing concepts for your operating SAP systems which ensure that your systems maintain high performance and your storage requirements remain manageable. We can also help make sure that all audit-relevant data is released in accordance with current legislation (GDPdU – principles of data access and auditing of digital documents) and is available long-term for audit scenarios. With the introduction of optical archiving systems, e.g. as part of a creditor workflow or in the record management environment, we can support you in creating more efficient business processes, thereby making a significant contribution to the reduction of costs in your company. We can assist you not only in the selection process for archive suppliers, but also in concept development, project implementation and productive consulting. Get in touch with us!
