

International corporations use itelligence know-how for portal solutions

Nordzucker AG uses SAP portal with support from itelligence

Frankfurt, Sept. 30, 2002 - itelligence, the Frankfurt-based full-service provider for SAP, has won another contract for implementation of an SAP portal project. Following Nordenia International AG, Nordzucker AG has now also chosen itelligence as implementation partner. The Nordzucker contract highlights the expertise acquired by itelligence in the so-called SAP "New Technologies". itelligence AG's range of portal services includes systems installation, hosted systems operation, project management and consulting, customizing and the roll out strategy. The portals are based on the mySAP Enterprise Portal 5.0 which includes content and knowledge management components. The SAP Portal technology has been available in Germany since December 2001.

The individual projects

At Nordzucker AG, which employs 4,000 people and generates annual sales of approx. EUR 1.2 billion, itelligence AG will set up an information pool for customers, sugar beet suppliers and employees. After completion of the project, suppliers will be able to do business directly with the Braunschweig headquarters via the Internet. They will have direct access to their account statements and delivery information as well as to an order system at Nordzucker. Additional information sources will be integrated to gradually expand the portal. The internal portal section for the company's employees in eight Northern German plants in Schleswig-Holstein, Mecklenburg-Vorpommern, Saxony-Anhalt and Lower Saxony will not only include traditional contents such as knowledge management, employee self service, e-mail and e-procurement but also a Balanced Scorecard system.

At Nordenia International AG, itelligence is currently implementing a portal for the company's 2,900 or so employees in nine branches on five continents. Nordenia International develops, produces and finishes industrial packagings and films. Nordenia's employee portal will integrate internal systems such as Outlook, DMS and other individual applications. The aim is to ensure access to all company data from a standardized user interface. After the first phase, which covers some 250 users, Nordenia intends to expand the portal internationally for all employees before opening it to suppliers. Says E-Business Manager and Project
